

 **TELEDYNE**

ANALYTICAL INSTRUMENTS

Series 7500

**Non-Dispersive
Infrared
Gas Analyzer**

CO2, CO, CH4, SO2, O2

Teledyne's Series 7500 Infrared (IR) Gas Analyzer is capable of detecting up to three individual IR absorbing components (i.e. CO, CO₂, CH₄, SO₂) on a continuous basis. Packaged in either a 19" rack mount or NEMA-4 wall mount enclosure, the Series 7500 can also be supplied with an oxygen sensor, providing the operator with a space-saving, four in one, cost-effective design. The NEMA-4 enclosure can be X or Z-purged to satisfy hazardous area installation requirements.

A high-sensitivity mass flow sensor is utilized for infrared measurements. By using a single beam, single path design in conjunction with a serial dual-layer transmission detector, the 7500 delivers long-term, drift-free performance. The oxygen concentration in the sample gas can be detected by either a built-in paramagnetic sensor or an externally mounted, in-situ-based zirconium oxide sensor.

The concentration of the desired gases is displayed on a large, back-lit LCD. The user interface is intuitive and the menu / mode selection buttons, which are readily accessible, provide the operator with dynamic control and extensive diagnostic capabilities.

FEATURES

- Simultaneous measurement of up to four components
- Excellent long-term stability
- Slide-out, chassis design to facilitate any optical or maintenance adjustments required to fine tune analyzer performance (7500A)
- In-depth, valuable analyzer functions attainable from the front-panel user interface buttons
 - o Follow & Hold output signal control (during calibration)

- o Remote range change control
- o Range ID signals
- o Auto-calibration with user adjustable frequency and gas flow time setting programming capabilities
- o Remote auto-calibration initiation
- o Auto-calibration status contacts
- o Instrument or calibration error contact outputs

OPTIONS

- Percent O₂ detector – Paramagnetic (built-in) or ZrO₂ externally installed), user preference
- O₂ correction (the conversion of measured CO and SO₂ readings into values at standard O₂ concentration).
- Communication functions:
 - o RS-232C (9 pins D-Sub connector)
 - o Half-duplex bit serial
 - o Modbus protocol

APPLICATIONS

The Series 7500 is ideally suited for multi-parameter gas analysis requirements for:

- Combustion control within the power, pulp and paper, steel, and cement industries
- Heat treating / Inert gas blanketing atmosphere control
- Bulk-gas impurity analysis within the air separation industry
- Anaerobic digester / Bio-gas / Land-fill gas analysis
- Vent gas analysis of oxyhydrochlorination reactors (EDC)
- Off-gas analysis on PTA and Maleic Anhydride reactors
- Fluid Catalytic Cracker (FCC) regeneration gas analysis
- Ammonia / Fertilizer process gas stream analysis
- Continuous emissions monitoring

SPECIFICATIONS

Principle of measurement: Non-dispersive infrared (NDIR) absorption method. Single source, dual-layer transmission design.

Measurable gas components and measuring range:

	Min range	Max range
CO₂	0 - 100 ppm	0 - 100 vol%
CO	0 - 200 ppm	0 - 100 vol%
CH₄	0 - 1000 ppm	0 - 100 vol%
SO₂	0 - 1000 ppm	0 - 5000 ppm
O₂ (built in)	0 - 5 vol%	0 - 100 vol%
O₂ (external zirconia)	0 - 5 vol%	0 - 25 vol%

- Maximum four components measurement including oxygen
- 1 or 2 measuring ranges per component
- Measuring range ratio: $\leq 1:5$ (except built-in O₂) $\leq 1:20$ (built in O₂)

A maximum of four components and two ranges are selectable including an oxygen measurement. Other gases can be measured with the Series 7500. Please contact the factory for details.

Accuracy:	$\pm 1\%$ of FS range
Display:	Digital indication (4 digits – back-lit LCD)
Analog output signal:	4-20 mADC or 0-1 VDC; 550 ohms max for 4-20 mADC and 100k ohms for 0-1 VDC
Analog input signal:	For externally mounted ZrO ₂ percent O ₂ sensor (purchased separately)
Relay contacts:	250 VAC / 2 Amp; resistive load; all relay contacts are isolated from internal circuits
Contact input:	Non-voltage contact (On / 0V; Off / 5V, 5mA flowing at ON). Contact inputs are not isolated from one another.

Note: Only M3.5 screw terminals are used for signal inputs and outputs

Power supply:	100 VAC – 240 VAC; 50/60 Hz
Power consumption:	70 VA max
Operating conditions:	-5 to 45° C

Model 7500A - Steel casing (19" rack design for indoor use)

- Dimensions: 7" H x 19.0" W x 19.4" D
177 x 483 x 493 mm
- Weight: Approx 25 lbs (configuration dependent)

Model 7500B - NEMA-4 enclosure (wall mount design)

- Dimensions & Weight: Application dependent
- X & Z-Purge: Configurations available for hazardous area installations

Wetted parts

- Inlet / Outlet fittings: SUS304 NPT ¼ internal thread or Rc 1/4
- Sample cell: SUS304 / Neoprene Rubber
- Cell windows: CaF₂
- Internal tubing: Application dependent (Std = Toaron tubing)

Standard sample gas conditioning requirements

- Flow rate: 1L / min, ± 0.5 L / min
- Gas temperature: 0 to 50° C
- Pressure: 10 kPa or less (1.5 psig); sample gas should vent to atmospheric pressure.
- Dust: 100ug / Nm³ or less in particle size of 0.3um or less.
- Moisture: Below the point at which saturation occurs at ambient temperature.

EC DIRECTIVE COMPLIANCE

The product conforms to the requirements of the Low Voltage Directive 73/23/EEC and EMC directive 89/336/EEC (as amended by Directive 92/31/EEC), both as amended by Directive 93/68/EEC. It conforms to following standards for product safety and electromagnetic compatibility:

EN61010-1: 2001 Safety requirements for electrical equipment for measurement, control and laboratory use.

“Installation Category II”

“Pollution Degree 2”

EN61326-1: 1997, A1: 1998, A2: 2001

Electrical equipment for measurement, control and laboratory use — EMC requirements.

Series 7500 Infrared Gas Analyzers

PERFORMANCE

Repeatability: $\pm 0.5\%$ of full scale

Linearity: $\pm 1\%$ of full scale

Zero drift: $\pm 2\%$ of full scale / week

Span drift: $\pm 2\%$ of full scale / week

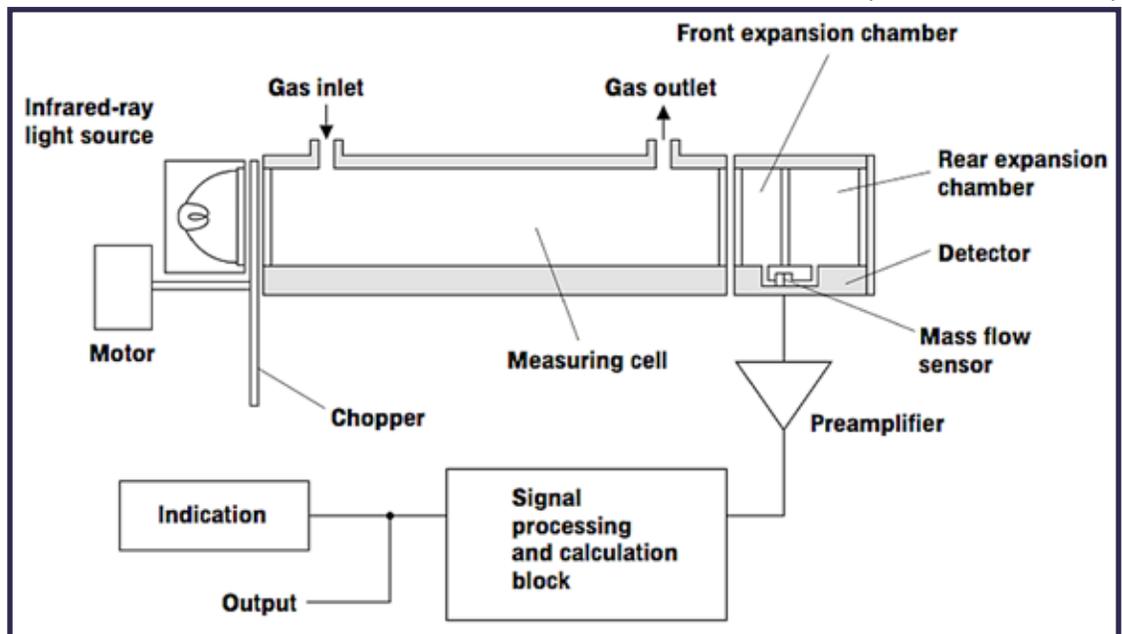

Response time (for 90% FS response):

One or two component measurement:
within 15 seconds including replacement
time of sample gas.

More than three components
measurement: within 30 seconds
including replacement time of sample
gas.

Model 7500B serves as the explosion proof configuration of the series. The NEMA-4 enclosure can be X or Z-purged to satisfy hazardous area installation requirements.

Principle diagram of NDIR type measurement (for CO₂, CO, CH₄, SO₂)
